Response to Arguments

1. The applicant argues that there is no disclosure or suggestion that the gasket is formed by dispenser method or screen printing method. The applicant is reminded that in a product-by-process claim, the patentability of the product does not depend on its method of production. Since the applicant has not shown any structural differences between the gasket formed by the dispenser or screen printing method and the gasket taught by Bernacki, the Bernacki reference still reads on claim 1.

The applicant also argues that the bonding of the gasket in Bernacki means binding to only one of the separators. Bernacki discloses in paragragh [0018] that "for the purpose of retaining the gasket in place, the gasket may be bonded to the plate instead by, for example, adhesives <u>as known in the art</u>". Since it is known in the art to bond both separator plates to the gasket with adhesive, claim 1 still reads on the Bernacki reference. In addition, Bernacki also discloses in paragraph [0017] that "gasket 18 seals the <u>plates</u> so the reactants do not leak". Further, in paragraph [0018], Bernacki also discloses "the surfaces 21 of the <u>plates</u>". This implies that both plates need to be bonded to the gasket. Therefore, it is clear from the disclosure of Bernacki that it is known in the art to bond both separator plates to the gasket with adhesive.
